WHAT IS CLAIMED IS:

1. A computer-implemented method for obtaining information contained in multiple knowledge bases, the method comprising:

receiving a request for information from an application system; using the request to create a first search query;

using the first search query to obtain a first search result that includes information contained in a first knowledge base;

using the first search result to automatically create a second search query; and using the second search query to obtain a second search result that includes information contained in a second knowledge base.

- 2. The computer-implemented method of claim 1, wherein the method further comprises sending the first and second search results back to the application system.
- 3. The computer-implemented method of claim 2, wherein the method further comprises processing the first and second search results.
 - 4. The computer-implemented method of claim 3, wherein processing the first and second search results includes:

using the first search result to obtain additional information from the first knowledge base; and

sending the additional information obtained from the first knowledge base back to the application system.

- 5. The computer-implemented method of claim 3, wherein processing the first and second search results includes filtering the first and second search results according to a set of predefined filtering rules.
- 6. The computer-implemented method of claim 3, wherein processing the first and second search results includes classifying the first and second search results according to a set of predefined classification rules.

- 7. The computer-implemented method of claim 1, wherein using the first search result to automatically create a second search query includes using the first search result along with a set of predefined search rules to automatically create the second search query.
- 8. The computer-implemented method of claim 1, wherein using the first search result to automatically create a second search query includes:

extracting information from the first search result; and including the extracted information within the second search query.

9. The computer-implemented method of claim 1, wherein:

using the first search query to obtain a first search result includes obtaining the first search result directly from the first knowledge base; and

using the second search query to obtain a second search result includes obtaining the second search result directly from the second knowledge base.

10. The computer-implemented method of claim 1, wherein:

using the first search query to obtain a first search result includes obtaining the first search result from a first search engine; and

using the second search query to obtain a second search result includes obtaining the second search result from a second search engine.

- 11. The computer-implemented method of claim 1, wherein the application system includes a call-center application.
- 12. A computer system for obtaining information contained in multiple knowledge bases, the computer system being programmed to:

receive a request for information from an application system;

use the request to create a first search query;

use the first search query to obtain a first search result that includes information contained in a first knowledge base;

10

use the first search result to automatically create a second search query; and use the second search query to obtain a second search result that includes information contained in a second knowledge base.

5 13. A computer-readable medium having computer-executable instructions contained therein for performing a method, the method comprising:

receiving a request for information from an application system; using the request to create a first search query;

using the first search query to obtain a first search result that includes information contained in a first knowledge base;

using the first search result to automatically create a second search query; and using the second search query to obtain a second search result that includes information contained in a second knowledge base.
